

La Condizione Della Donna Nelle Societa Primitive E Nell Antico Diritto Romano Studiata Nei Suoi Rapporti Colla Evoluzione Storica Della Famiglia

Filesize: 8.73 MB

Reviews

This published book is wonderful. It is really simplified but unexpected situations within the fifty percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Dr. Janis Reilly)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 52 pages. Original publisher: Washington, DC : Western Energy and Land Use Team, Division of Biological Services, Research and Development, Fish and Wildlife Service, U. S. Dept. of the Interior, 1984 OCLC Number: (OCoLC)294959956 Subject: Habitat (Ecology) -- Mathematical models. Excerpt: . . . indicate that avian species in Puerto Rico may not separate the midstory and overstory layers, whereas, in Panama, they may subdivide the mid-and overstory into three layers of habitat (MacArthur et al. 1966). The development of these models was based on the assumptions that nonfish vertebrate wildlife species partition habitat resources along a vertical dimension and that this vertical dimension can be represented as habitat 1. layers. Habitat layers used in these models are defined in Table These definitions are assumed and not proven either for the Sonoran Desert of west-central Arizona or for other regional habitats. The quantity of vegetation that the different habitat layers must contain in order to provide the necessary structure for wildlife use is unknown. Presumably, animal species react to the presence of a particular habitat layer when the structure is developed beyond some threshold value. A process has been developed that associates wildlife species with the different vertical layers of habitats (Short and Burnham 1982; Short 1983). This was accomplished by positioning wildlife species within a species-habitat matrix formed by selecting, a axes, two very important niche parameters for s which species-habitat information was likely to be available. The x-axis of the matrix was subdivided into layers of habitat where breeding (nesting, hatching, or birthing) occurs, and the y-axis of the matrix was subdivided into layers of habitat where foraging occurs (Fig. 2). The y-axis of the matrix was spl...
