I have seen cases in which this phenomenon was constantly present and was due to fixation of the colon by adhesions in the above-described position. In addition to the shape of the tumor, the sequence of the appearance of symptoms will be of value. In involvement of the appendix, the pain is the initial symptom and is soon followed by vomiting and fever. In cholecystitis, however, the vomiting occurs late if at all. The rectal examination will be of particular importance in these cases, the rigidity of the rectus muscle will not be so much restricted to the upper portion as in gallbladder disease, while the abdominal reflexes of the middle and RETROCECAL APPENDICITIS 187 lower parts are absent. Pronounced and constant indicanuria is rarely present in disease of the gallbladder, while it is quite a constant finding in appendical affection. Enlargement of the liver should be used only with caution as a diagnostic sign. High retrocecal appendicitis may also imitate acute gallbladder disease by producing a severe colicky attack with vomiting and fever of varying intensity, and with the pains in the anterior and posterior liver regions. Deep inspirations increase these pains; there are slight traces of icterus and some albumin in the urine, and symptoms of acute nephritis may follow. The patient also has exquisite tenderness in the region of the incisura of the liver, with hyperesthesia of the skin in this region, lagging or absence of respiratory movement of...
